ORIGIN	WP8 - Dissemination
Deliverable	D8.1 – Website produced and maintained

1. Summary of Evidence

One of the deliverables of Work Package 8 (Dissemination) of the ORIGIN project was to complete deliverable D8.1- Website produced and maintained by month 4 (February 2012). This has been achieved.

The ORIGIN website was established in December 2012 <http://origin-energy.eu>.

The Home, Project, News and Deliverables tabs provide publicity and information on the project (see page 2 and 3). The events tab has a calendar highlighting key events (see page 4). The Publications tab will allow access to documentations regarding project publications. The links with partner websites are currently being established.

Also the website links to a number of social media sites: Linked in, Facebook and Twitter, thus providing a platform for discussion.

The website has the facility for authorised project members to log in and access the consortium tab and also to update the website. The consortium tab will keep a record of all the project deliverable and milestones and any other relevant shared information (see page 5).

The website has been set up in a timely fashion and it will be well established for the dissemination of results.

As the record of the deliverables need to be kept longer than the actual website the remainder of this document captures snapshots of the website as of the 11/03/2013 showing its development to date.

2. Home Page

As can be seen from the snapshot below, this contains links to the Events and News pages, It also gives a brief summary of the project and links to ORIGIN's Facebook, Linked in and Twitter accounts

The ORIGIN project's mission is to develop a sophisticated intelligent ICT system for the management of energy in a community, and associated business models.

The purpose of the proposed solutions is to orchestrate efficient and balanced use of locally generated energy from renewable sources, such as wind or solar energy. User-friendly tools will be developed that provide demand and supply forecasting and propose energy habits. A simple example of this would be to propose the scheduling of energy demanding tasks, such as operating a washing machine, in periods of expected peak supply in accordance with weather forecasting, in the case of wind or solar energy.

The project is a collaboration of eight organizations from five different European Union member states. The developed solutions will be validated in three eco-communities in three different climatic setting in northern Scotland, southern Portugal and the Italian alpine foothills.

3. News Page

The News page contains 'News' on the ORIGIN project.

The screenshot shows the ORIGIN project website's news page. The header includes the ORIGIN energy logo, navigation links (Home, Project, News, Events, Publications, Deliverables, Contact), and logos for the European Union and COOPERATION. The main content area displays three news items:

- Energy Audits in Communities**: Submitted by stefan on Wed, 01/23/2013 - 19:01. The article describes energy audits performed by a team from Heriot-Watt University, the University of Strathclyde, and Instituto Tecnológico de Informática at the Findhorn Ecovillage. It mentions that the audit will continue at Findhorn and will commence at the Italian Damanhur community in February and at the Portuguese Tamera community in March. A [Read more](#) link is provided.
- Findhorn Community Engagement Presentation**: Submitted by Lucy Bryden on Tue, 01/22/2013 - 14:29. The article states that Dr Edward Owens hosted a community engagement presentation at the Findhorn Community on Sunday the 6th of January. A [Read more](#) link is provided.
- STV News Article**: Submitted by stefan on Wed, 12/05/2012 - 17:09. The article mentions that the ORIGIN project has been featured in an STV News article, with a link to <http://local.stv.tv/forres/news/features/203628-moray-eco-village-assists-pioneering-research-on-renewable-energy/>. A [Read more](#) link is provided.

The sidebar on the right contains social media icons for LinkedIn, Facebook, and Twitter, a search bar, and a user login form with fields for 'Username or e-mail' and 'Password', and a 'Log in' button.

5. Consortium Shared File storage

This is a file storage area for the project where the outputs from the deliverables, milestones and any other relevant information will be stored.

The screenshot shows the ORIGIN energy website's Filedepot interface. The top navigation bar includes links for Home, Project, News, Events, Publications, Deliverables, Contact, and Consortium. The main content area features the Filedepot interface with a sidebar for folder navigation (Reports, Recent Folders, Top Level Folders, and Work Packages 1-9) and a central file list. The file list shows a folder named 'Work Package 8' containing a file '1.1.0 Deliverable 8.1' dated '03/06/13'. On the right side, there are social media icons for LinkedIn, Facebook, and Twitter, a search bar, and a user menu with links for 'My account', 'Add content', and 'Log out'.

This project has received funding from the European Union Seventh Framework Programme (FP7/2007-2013) under grant agreement n° 314742.
